

Name: Cannonbolt

One-line Introduction: Cannonbolt is the Omnitrix's DNA sample of an Arburian Pelarota from the destroyed planet Arburia.

Appearance: As Cannonbolt, Ben is a hulking, broad-shouldered alien covered in natural, yellow exo-plates on his back, shoulders, and the backs of his arms. He is mostly white with black on his upper half and has four claws on both of his hands. Cannonbolt is covered in fur across the thickest parts of his body, while every other part except for his elbows and knees is short fur. When Cannonbolt turns into a sphere, he rolls up into a ball, with his backplates and the plates on his hands covering him. His sphere form has semi-circular stripes across his body, with black lines around the circular plates, and his side plates are the plates on his shoulders. It is described as a position similar to a roly poly. In the Original Series, Cannonbolt had sharp teeth, yellow eyes, and wore the original Omnitrix symbol on his forehead. In Alien Force and Ultimate Alien, Cannonbolt's teeth became fuller and human-like, the black stripe on his chest was gone, his eyes were recolored green, and he wore the original Omnitrix/Ultimatrix symbol on his chest. In Omniverse, Cannonbolt regains his black stripe from the Original Series, which now goes down to his belly/chest. His eyes are no longer connected to his shoulders, his palms are now flat instead of bulging, the yellow bolts on his body are now hexagonal and there are three plates on his back instead of two. Depending on the episode, Cannonbolt's teeth is either dull or sharp like his previous series' designs. 16-year-old Cannonbolt wears the Omnitrix symbol on his chest, while 11-year-old Cannonbolt wears the original Omnitrix symbol (which has been recolored green) on his forehead to reflect his original appearance. Ben 10,000's Cannonbolt looked similar to his 10-year-old self, but with a different color scheme for the legs, which sported a black pants-like design. His claws were longer and outlined in grey, his eyes were closer to his shoulder armor, and the Omnitrix symbol was higher up, being on the top of his head rather than his forehead. Gwen 10 as Cannonbolt looks similar to Rollaway, albeit the markings on her eyes are upturned, similar to eyeliner. She has feminine lips, freckles, a hair clip on her left side, pink eyes, and a cat symbol-shaped Omnitrix on her chest. Her skin is light blue, while her bolts and lips are dark blue. She has black markings on her torso and pelvis in a similar design to a bikini. Her bolts are also smaller than Ben's Cannonbolt and Rollaway. When curled into her shell, Cannonbolt looks just like Rollaway in his shell.

History: Cannonbolt first appeared in The Big Tick, where he was accidentally unlocked by Gwen, and Ben could not figure out what powers he had aside from rolling around and decided Cannonbolt was useless in battle. **Weaknesses:** Cannonbolt's bipedal form is top-heavy, making him very unbalanced and clumsy. Cannonbolt cannot roll over slippery surfaces, as it will cause him to immediately uncurl from his sphere form and fall over. Cannonbolt can be trapped by strong adhesives. Similarly, he can be held in place by beings with as much strength as a Chimera Sui Generis. Cannonbolt's large body makes it hard for him to move in small spaces. Cannonbolt can be incapacitated by electricity when not curled into a ball. Similarly, Cannonbolt can be burned by extremely hot objects when not curled into a ball. In his uncurled form, Cannonbolt can be controlled by a Vladat via their Corrupturas.

**Powers and Abilities:** Cannonbolt can curl into a ball, encasing himself in his plating. Cannonbolt is nigh-invulnerable when curled into a ball, so invulnerable that he can survive a fall from Earth's atmosphere without suffering damage when curled into a ball. When rolled up, Cannonbolt becomes like a motorized wheel that can move at great speed and can increase his rotational momentum to slam into and/or run over enemies. Cannonbolt is able to maneuver around his surroundings in ball form thanks to the short fur on his body, registering shifts in air and motion around him. Between that and his excellent hearing, Cannonbolt receives something akin to echolocation - giving him "eyeless" vision. Cannonbolt can ricochet and bounce off surfaces like a pinball in sphere form, suffering little-to-no loss in momentum. Cannonbolt can also house people and fairly large objects within his spheroid form and provide them the same level of protection that

he has. In his spherical form, he can bounce to create shockwaves or spin into a fierce tornado. Cannonbolt's shell can deflect lasers and conduct electricity. Cannonbolt possesses enhanced strength, being able to fight on par with enemies about his size. He can also break free from traps made of Lepidopterran slime. Cannonbolt also has enhanced reflexes, being able to quickly dodge most attacks. Cannonbolt possesses enhanced digging. Cannonbolt is capable of withstanding the vacuum of space, but he still needs to breathe. Without an oxygen supply, Cannonbolt is limited to holding his breath. From inside his shell, Cannonbolt can withstand twice the heat of reentry into the Earth's atmosphere. Similarly, his shell is resistant to acids and lava, as well as cold temperatures and can withstand the plasma generated by members of Ball Weevil's species. Cannonbolt can be empowered by electricity.
