

Name: XLR8

One-line Introduction: XLR8 is the Omnitrix's DNA sample of a Kineceleran from the planet Kinet.

Appearance: XLR8 resembles a semi-armored Velociraptor. He has black orbs on his feet and a black tail with five blue stripes in the Original Series, four in Omniverse, and white in Ben 10,000's form. He possesses bulky claws on his three fingers that can only open and close. He wears a black cone-like helmet with a protective visor that slides over his face, which is part of his Kineceleran biology. When the visor is lifted, his blue face, green eyes, black lips, and stripes running under and in between his eyes are visible. XLR8 wears a black bodysuit and turtleneck-like shirt with a white stripe on the center, which is replaced with green in Omniverse. In Ultimate Alien, XLR8 looked exactly the same as he did in the Original Series, albeit his skin was slightly darker, and he was more muscular. In Omniverse, XLR8 is now taller and the white color on his shirt is replaced with green, which now covers his neck. The number of tail stripes have gone down to four, the black balls on his feet are bigger, and his visor is darker. 11-year-old XLR8 in Omniverse looks exactly the same as his 16-year-old self, except that he is shorter, and the green color of his shirt is white. He has three stripes on his tail. Ben 10,000's XLR8 was taller and more muscular-looking than his 10-11/16-year-old self. His arms, legs and tail stripes were white instead of blue, and there were less stripes on his tail. XLR8's clothing had longer sleeves with a pair of stripes under the shoulders and has an arrow-shaped symbol on his lower torso. Gwen 10's XLR8 is more upright. Her face lacks the black markings that Ben's has, as they are replaced with freckles. She has pink eyes and Gwen 10's hairclips, as well as a black helmet. The majority of her outfit is dark blue with a light blue section around her neck that goes down her chest in a V-formation, light blue stripes on her forearms and wrists, two light blue stripes on the end of her tail, and a light blue stripe on each of her lower legs where the outfit ends. Her visor now has pink markings, and her hands are more human-shaped with claws for fingers.

In the Original Future Timeline, XLR8 was originally the only Kinecelerans on Earth because the slow rotation of said planet made other Kinecelerans sick after a few days. This was retconned in Omniverse, as several Kinecelerans reside in Undertown.

Weaknesses: XLR8's biggest weakness is magnets and charged pulses, as they can completely throw him off-course and cause him to lose his footing and spin out of control. Opponents with good reflexes and reaction time can counter XLR8's speed and land a blow on him, such as Transylians, Tetramands, and Vulpimancers. XLR8's speed does not work on all surfaces: running on ice will make him lose his balance, causing him to slip and slide around; whereas running on sticky surfaces, such as Sploot's goo, leaves him stuck in place. XLR8 is vulnerable to electricity.

Powers and Abilities: XLR8 is a speedster with lightning-quick reflexes and the ability to reach speeds in excess of 500 miles per hour. He can accelerate so quickly that time appears to completely stop to him, allowing him to change the positions of things around him mid-motion, while only being able to be seen by a camera with a very high shutter speed. His speed power comes from manipulating friction, so he can also run up sheer walls and across non-solid grounds like water. Additionally, XLR8's tremendous speed and aerodynamic body makes him resistant to strong winds, such as the suction force of Dr. Viktor's portal. XLR8 has the potential to become even faster with age, seen when Ben 10,000 as XLR8 managed to outrun Ken as XLR8 in a race, even when Ken had a head start. XLR8 was also capable of travelling globally in just a few seconds when used by Ben 10,000. This also boosts his strength, shown when his XLR8 was able to greatly damage Exo-Skull with speed-enhanced physical attacks. Compared to his fellow speedster alien Fasttrack, XLR8 seems to have more control over his speed; he can immediately end a run by stopping in place, while Fasttrack can have trouble stopping if he runs too fast. Furthermore, he is

confirmed to be faster than Aerophibians on the ground. Even without his incredible running speed, XLR8 is capable of thinking, acting, and reacting at superhuman speed. His sharp reflexes allow him to dodge attacks with little to no effort, and change direction very easily while running. He is able to type on keyboards or keypads at high speeds. When using this skill to bypass a multiple-digit code, he can think of and input every single possible combination instead of guessing, as he did when trying to remove SevenSeven 23's bomb from Ben 23's arm. XLR8 is capable of creating vortexes by generating a centripetal vacuum powerful enough to lift a To'kustar, either by running in a circular pattern or spinning at supersonic speeds. He can also combine this with water running to create water vortexes by running in front of or around his enemies. He can even combine this with fire, as demonstrated by Helen. XLR8 can deliver attacks in rapid succession, such as excessively kicking, or stabbing with his scissor-like claws. XLR8 has great amounts of strength, as he was able to lift multiple people without slowing down while running on water. His strength shines the most with striking, as he was able to punch Rojo harder the shell of a military tank could. XLR8 is durable enough to withstand being thrown against a wall, and can adversely survive coming to a dead stop at full speed. XLR8 is capable of jumping exceptionally high, and incredibly far when his jump height is mixed with his speed. XLR8's tail is prehensile, and can hold objects if his hands are full, as XLR8 held a Null Void Containment Egg with it when he was about to trap Devlin. XLR8 has a natural retractable visor hidden under his helmet. This visor helps to guard his face when running at high speeds for long periods of time. As Ben 10,000 used nanotech to enhance his aliens in the future, XLR8's visor became equipped with a scanner. XLR8 is capable of creating bursts of static electricity. XLR8 can generate a trail of fire while running.
